

Security Health Plan Medical Pharmacy Program Magellan Rx Post Service Claim Edits Program

For certain medications billed under the member's medical benefit, Magellan Rx applies pre-payment claims edits to diagnosis criteria and criteria for maximum units. These edits verify that claims are paid in accordance with each policy's stated clinical criteria as well as the maximum units previously authorized.

Post service pre-payment claims edits allow for the management of medications under the medical pharmacy benefit with the same sophistication that can be applied under the pharmacy benefit. This practice will:

- ensure providers are utilizing physician office-billed medications as per their FDA label and Compendia approved uses
- ensure all diagnosis values are validated for eligible diagnosis
- check for maximum units, by medication, gender, diagnosis and weight
- verify prior authorization (PA) on medications that require PA
- eliminate claim submissions with physiologically impossible doses
- validate loading dose
- validate medication waste, stopping the routine billing of full vials
